

a Frozen OOD-versus-ID comparison

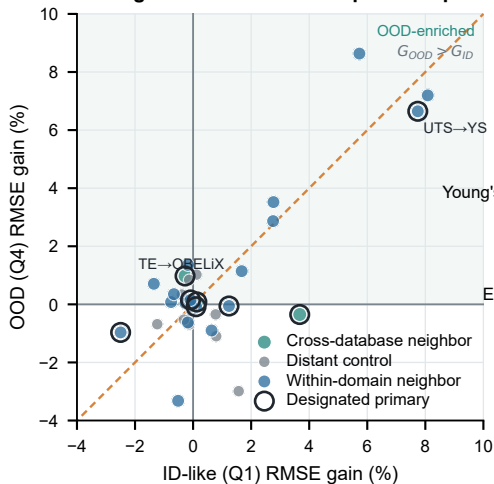

b

Designated OOD gains fail the complete repair gate

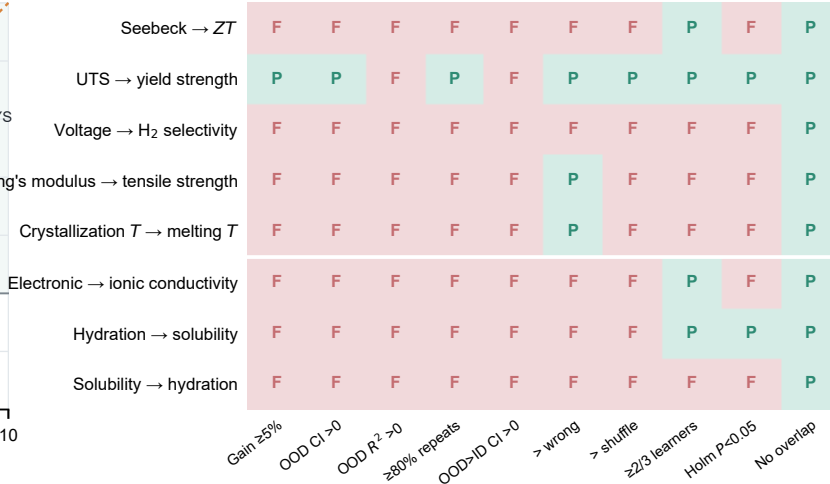

c Average transfer and OOD-specific repair are distinct

d

No designated edge satisfies the complete conjunctive gate

Programme mean OOD gain +0.92% [-0.35, +2.92]; full passes: 0/7 programmes, 0/3 cross-database edges.

Intervals are conditional on the frozen data snapshot and evaluation groups.
