

Bridge experiments are conditional actions, not a substitute for missing route data

The current synthesis evidence supports data recovery before route selection; no specific synthesis route is nominated.

a

Fail-closed experimental action policy

b

Current route-selection readiness

Requirement	Ready
donor precursor and stoichiometry fields	YES
donor temperature and time fields	YES
donor negative and partial outcomes	YES
complete recipient attempt table	NO
recipient failed and partial outcomes	NO
candidate-level synthesis route identifiers	NO
two or more comparable route alternatives	NO
frozen target checksum and grouped split	NO

c

ROUTE CHOICE: NOT EVALUABLE
1,035 donor reactions · 355 reported target attempts
complete attempt table and route alternatives not verified
